EDUCATION

Carnegie Mellon University , 08/2022 – 12/2026 | Pittsburgh, PA

B.S. in Computer Science, Minors in Design and Human Computer Interaction

Relevant Coursework: Distributed Systems, Deep Learning Systems, Machine Learning, System Design, Algorithm Design and Analysis, Data Visualization, Data Structures & Algorithms, Computer Systems, Computer Networks, Human-Centered Software Design, Functional Programming, Object Orientated Programming

Extracurriculars: Head of Photography Lunar Gala, Tricking Club PR Chair, ColorStack, ScottyLabs Tech Team,

PROFESSIONAL EXPERIENCE

Software Engineer Intern - Infrastructure & Distributed Systems, *Netflix* 05/2026 – 08/2026 | Los Gatos, CA

- Architected a two-component system comprising enabling oncall engineers to manage live ad products entirely from Slack
- Constructed new infrastructure connecting a Slack bot frontend (Typescript) to an LLM-powered backend agent (Java) .
- Designed and created tooling (with guardrails) giving agent the ability to read request forms and create necessary DB entities
- Reduced average end to end workflow time by 85% and eliminated manual multi-step process

Software Engineer Intern - Backend, *LinkedIn* 05/2025 – 08/2025 | Mountain View, CA

- Led the redesign of the Applicant Forecasting system for LinkedIn's Jobs-Marketplace Core Product Engineering Team
- Designed new agnostic system in **Java** reducing onboarding time for **tensorflow ML models** cutting development time by 25%.
- Created dynamic data fetching infrastructure reducing the number of unnecessary **API** calls and **Pinot** table queries by 40%.
- Set up **Kafka** events to track resource coverage from **gRPCAPI** calls and set up data analysis with **Spark**

Software Engineer Research Assistant - Data Visualization, 01/2024 – 10/2024 | Pittsburgh, PA

Data Interaction Group Lab, Human Computer Interaction Institute

- *Contributed in the creation of Skeleton,* a tool allowing users to create **data visualizations** navigable by assistive tools.
- Created graphical user interface that integrates an algorithm that translates visual designs into usable graph data structure.
- **Co-Authored Skeleton Research Paper for IEEE VIS 202**6, and authored research poster for IEEE VIS 2024

Intro to Computing + Great Practical Ideas for Computer Scientist Instructor, 06/2024 – 05/2026 | Pittsburgh, PA

School of Computer Science, Carnegie Mellon

- Instructed **100+ college** and **pre-college students** on **data structures** and **algorithms** in **Python**.
- Led lectures for **200+ Computer Science students** on fundamental programming tools such as **Git**, **Linux/Unix** and **Bash.**
- Led Office Hours with guided **program testing** and **debugging.**

SKILLS

Languages: Java, Python, TypeScript, JavaScript, C, HTML/CSS, SQL, SML

Frameworks/Libraries: Svelte, Sveltkit, TensorFlow, PyTorch, D3, Mokito, Flask, Spring Boot

Tools: Git, Linux, Figma, Adobe Lightroom, Adobe Illustrator, Adobe Photoshop, Google Workspace

PERSONAL PROJECTS

Spotify Playlist Version Control , *Python, Flask, Spotify API, HTML/CSS, Figma, SQL*

- Platform allowing users to save, preview and reload versions of their Spotify playlists using the Spotify API.
- Used SQL database to store user information and Python Flask Backend to handle API calls and internal server logic.
- Created internal tree-like structure to track and efficiently retrieve version history.

HotKeys , *D3, Svelte, Sveltkit, Typescript, HTML/CSS*

- Designed and built interactive visualization tool that aims to show character frequencies and keystroke habits.
- Encoded Data is via heatmap on a keyboard using D3, Svelte components, Typescript and file converter API.
- Combined bigrams/trigrams with character trajectories across keyboard to create meaningful user interactions

GoPhoto , *TypeScript, NextJS, Vercel, ReactJS, React Native, SQL, AWS, Figma, Stripe API*

- Full stack Platform designed to help connect photographer and customers more efficiently.
- Maintained **SQL database** to store photographer and client information, **AWS** for photo upload and storage.
- Implemented on-site direct messaging and payment (using **Stripe API**),
- Maintained seperate views for clients and photographers creating **20+ photographers/clients** connections and **1000$+ revenue.**
